

MECTEC

Leading
Labelling
Solutions

Nothing is Impossible

There are increasing demands for handling products and merchandise in an effective way, from the manufacturer to the end-user. Faster handling and delivery times, with the correct product, in the correct place, at the correct time, are of great importance to your profits and market strength.

With clear product information, consecutive product marking, your products can be identified and rationally handled all the way through the production chain.

Mectec's customer products set unique demands on the label design, content and style of application. Sizes, and packing methods vary. The product profile may be round, flat, uneven etc. It's material may be of a soft, fragile, glossy or rough nature.

Labels are often applied during the manufacturing process, with high production speeds and with frequent adaptations. Furthermore, the labelling equipment must work faultlessly in tune with other machinery – often in harsh, dusty environments.

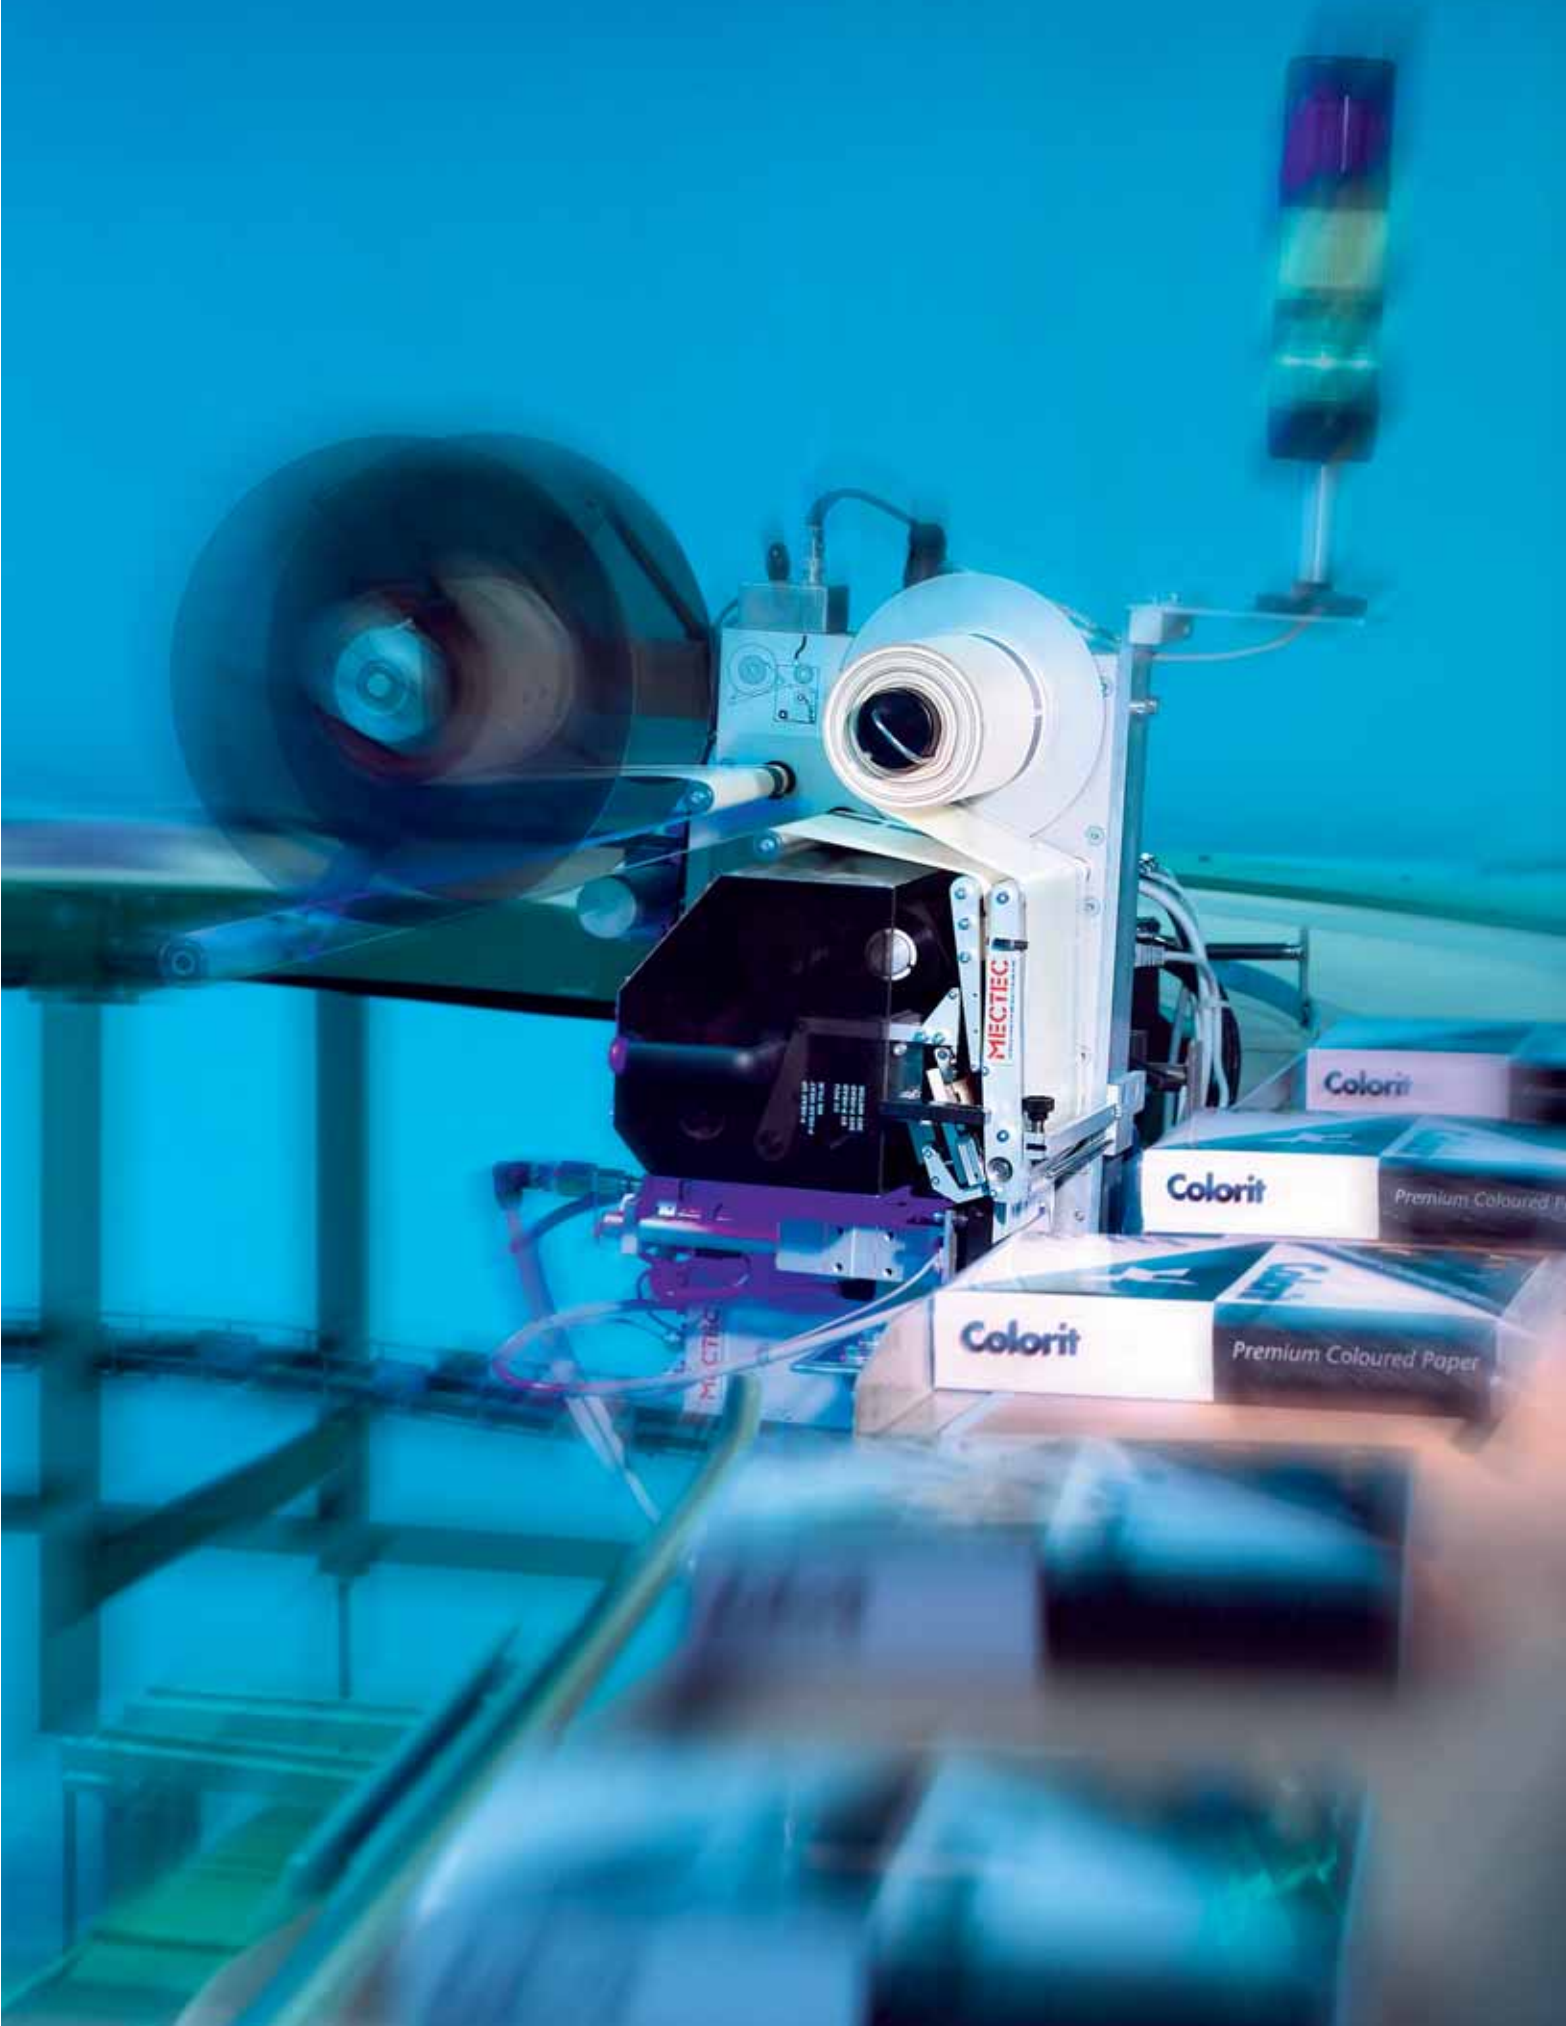

Mectec has a long experience and extensive knowledge of labelling and marking systems for different industrial applications world-wide. We provide one of the markets widest range of printers, applicators and software for automatic marking and labelling.

Worldwide Competence and Resources

Together with our network of qualified local distributors and partners around the world, we have the competence and the resources to develop and create the solution you require. You can feel assured in receiving first class support and services to secure your investment throughout its entire lifetime.

We like challenges. Nothing is impossible!

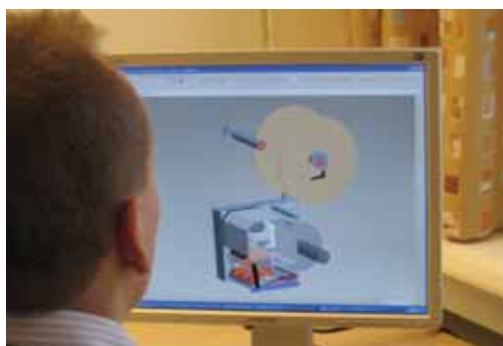

Mectec's machines are built for continuous operation – often in multiple shift – with high speed and close integration with other machines and systems.

Our skilled sales organization analyze your requirement on site and determine how the Mectec labelling system should be integrated into the production line. The path from analysis to proposal is very fast.

By using the CAD technique, proposals and drawings are quickly produced.

Prototypes and small series are developed in our engineering plant - before the volume production is assigned to our subcontractors - all Swedish.

All Mectec machines are assembled, tested and controlled in our works before they are delivered to the customer.

From Analysis to Start-Up

Mectec is a specialist in in-line marking. Our strength is that we make complete solutions that work in tune with your manufacturing process. We are prepared for your demands, and know what works and what does not. (Your local representatives are accustomed to your local needs).

Our competent and professional technical staff, in co-operation with our sales team, handle all the steps in the chain – from requirement specifications to installation, operation, service and maintenance.

By choosing Mectec, you get a reliable and competent partner for Print & Apply solutions with local partners for support all around the world.

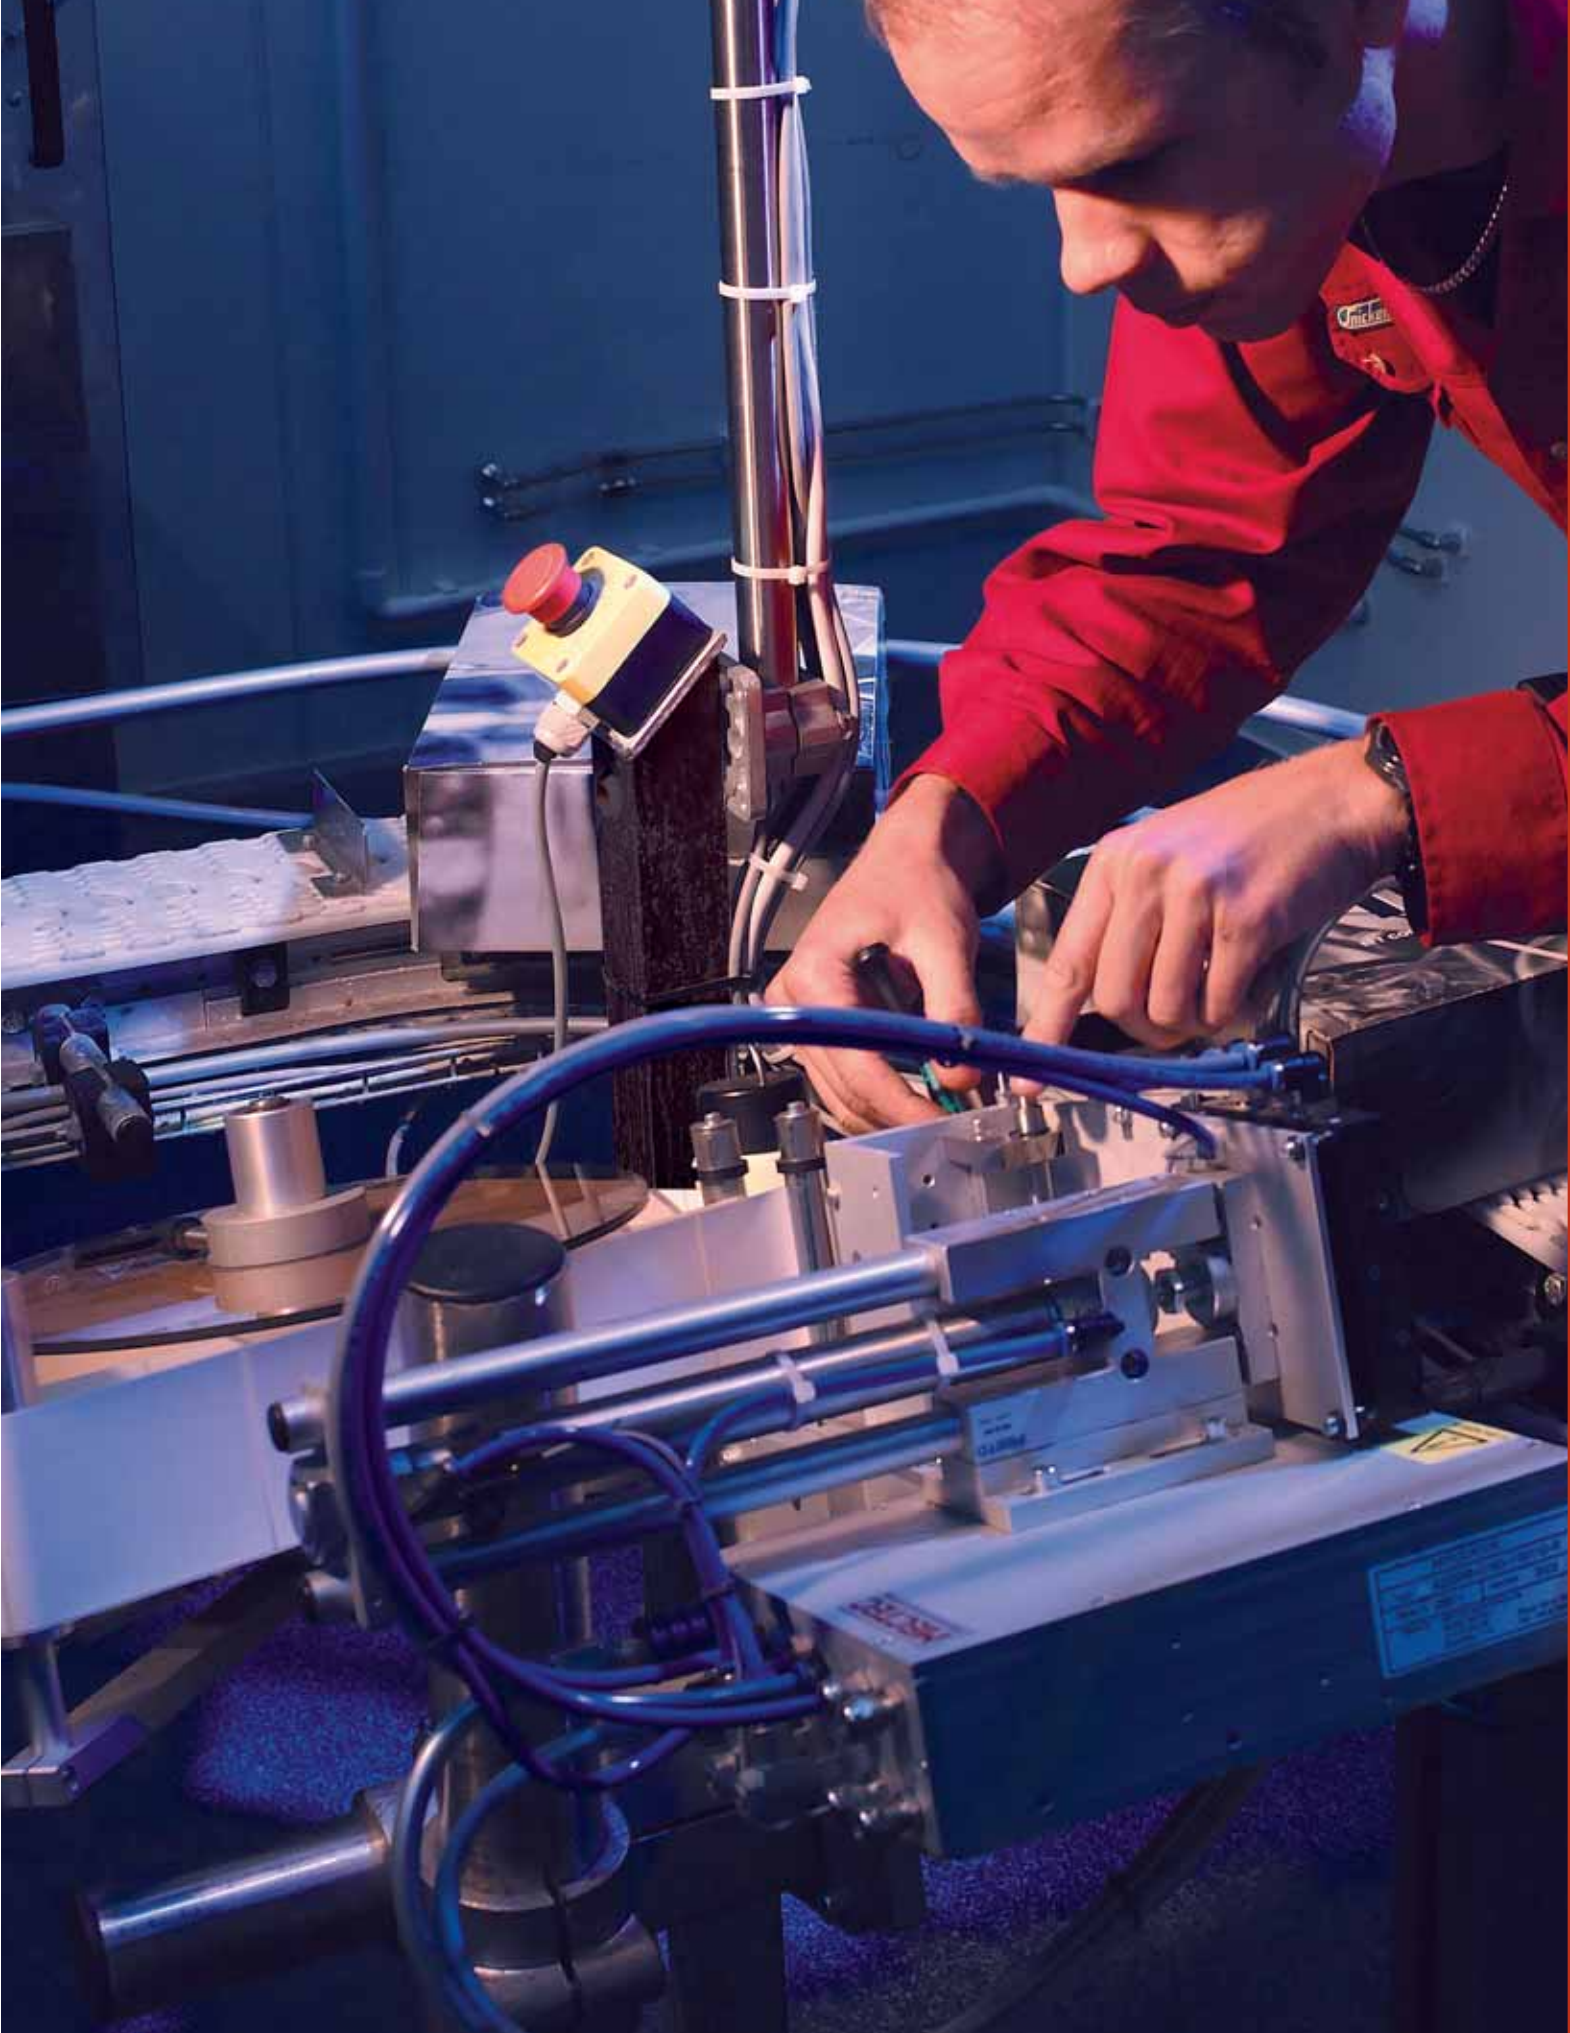

That makes us unique.

We also develop all software (both standard and customized) required for label design, control and communication with external systems.

Fast service response is important. Our service organization handles emergency service as well as preventative maintenance.

We install, fine-tune and make function and final checks. After that we have a presentation and training for all personnel who will operate or maintain the equipment.

We Build the System for Your Application

Robust, industrial and user-friendly design characterizes all our machines.

All machines are designed for optimal accessibility for service and maintenance –leading to minimal down-time.

With an adjustable stand, the labelling system can easily be adapted to the production line.

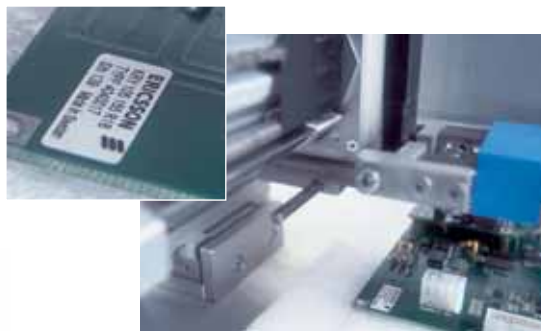

Our solutions are based on a number of modules – printers, applicators and accessories. The modular system allows cost efficiency and makes installation, service and maintenance easier. However, since each customer is unique, standard solutions are not always the answer.

Mectec's strength is that we can offer everything from stand-alone solutions with handheld terminals to more advanced systems with database communication and networked systems with multiple printers.

To meet each unique requirement and application, we customize the machine and solution to your exact requirements.

Our systems share a common characteristic in that they are robust, durable and have strength in their mechanical design, this allows them to cope with the different industrial environments. They are designed for ease of operation, service and maintenance.

You can feel assured that you get a reliable system that does its job year after year.

No product is too small - and no demands are too high. We develop the solution.

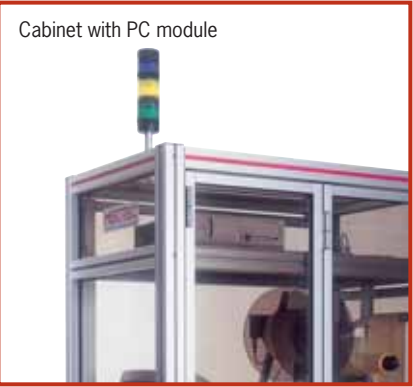

Labelling within wood industry - a rough environment that puts high demands on the equipment.

Control scanner

Emergency stop

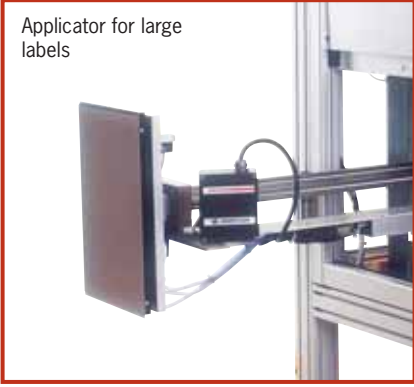

Cabinet with PC module

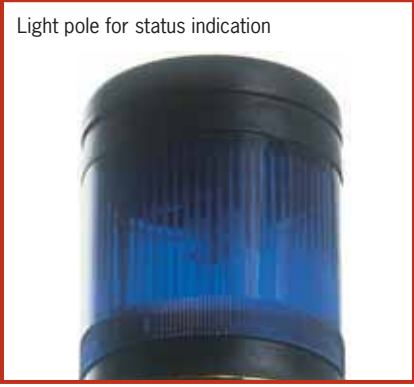

Power supply, safety switch and connections for communication & I/Os

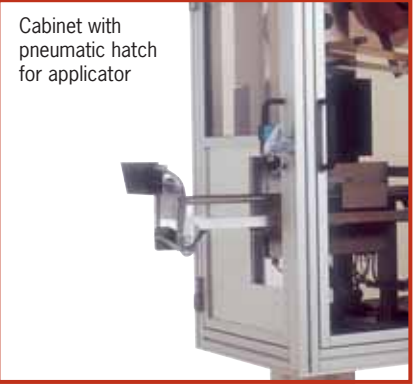

Applicator with staples for non-adhesive labels

Applicator for large labels

Light pole for status indication

Cabinet with pneumatic hatch for applicator

Cooling unit and telescopic shelf for PCU controller

Cabinet fan-unit with air filter

Filter, regulator and soft-start for incoming air. Industrial connectors

Handheld terminal

Height adjustment with crank

Our Standard Machines meet most Requirements

Mectec's wide range of standard printers, can be combined with our different styles of applicators. This gives us unique possibilities to create cost effective labelling systems, that meet the most diverse demands.

If there is a requirement for a special solution, our development team are pleased to help.

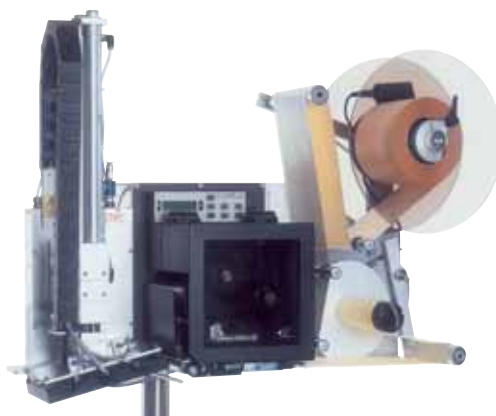

Our goal is to deliver the best and most reliable marking and labelling systems on the market!

Thermal Transfer printer T50 with all-round applicator A2220.

Thermal Transfer printer T50 with front- and backside applicator A3225.

The S80 is a system that integrates the Zebra Pax, Sato M84, DataMax A-Class or Valentin SPE series OEM print modules – together with any of the wide Mectec range of applicators

Thermal Transfer printer T70 with A4 applicator A2245.

D30 is a compact InLine Direct Thermal printer. This printer is equipped with blow applicator A1160.

Label applicator L100. For pre-printed labels. On "Height adjustment" stand.

PCU III Control unit for printers

The control unit represents the latest on the market. By using triple processors etc, our printers give very high performance in quality and storage capacity. Designed for ease of use, complete with an informative operator interface.

Worldwide Success

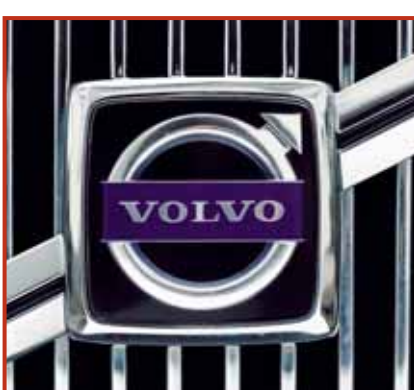

Mectec is a Swedish based high-tech company with a stable economic base. Our solutions, together with our network of dedicated local distributors and partners, have made Mectec one of the world's leading players in this field.

We are a supplier to both well-known, multi-national companies, as well as companies in our local markets.

Mectec solutions have proven benefits.
